

Do you know the true cost of an error?

When you think about the cost of software errors, the first thing that comes to mind might be Sev1 issues that result in expensive downtime, war room costs and delayed product roadmaps. But what about the hidden costs? What about the seemingly harmless errors that somehow end up costing you millions?

Annual Savings with OverOps	
Developer Productivity	\$991,800 / a year
IT Ops / SRE Productivity	\$181,523 / a year
Log Ingestion	\$43,680 / a year
CPU Usage	\$297,000 / a year
SLA Violations	\$100,000 / a year
Brand Tarnishment	\$16,667 / a year
Total	\$1,630,670 / a year

Prioritize and fix “harmless” errors – before they end up costing you.

Every error has a price. OverOps arms you with the data you need to understand which errors are costing the most, and to help you prioritize and resolve them fast.

Infrastructure Costs

From memory leaks to excessive logging.

Customer Experience Impact

From SLA violations to brand tarnishment.

Team Productivity & Satisfaction

From roadmap delays to on-call burnout.

Wondering how much application defects are costing you?
Visit calculator.overops.com to find out how errors are impacting your bottom line.

Hidden costs are lurking beneath the surface of your application.

OverOps can help you find them.

Visible Costs
